

## EZ-KIT ADZS-UCM3029EVLITE for the ADuCM3027/ADuCM3029 Microcontroller

### INTRODUCTION

This getting started guide describes the ADuCM3027/ADuCM3029 EZ-KIT package that is used to evaluate the ADuCM3027/ADuCM3029 microcontroller units. This guide describes the different parts and components of the EZ-KIT evaluation board, the functionalities, and the configurations that enable the user to develop applications with the device.

### DOCUMENTS NEEDED

#### [ADuCM3029 EZ-KIT® Manual](#)

### GENERAL DESCRIPTION

The ADuCM3027/ADuCM3029 are ultralow power, integrated, mixed signal microcontroller units (MCUs) used for processing, control, and connectivity. The MCU system is based on an ARM® Cortex-M3 processor, which is a 32-bit RISC processor and runs up to 26 MHz. It can have up to 256 kB of embedded flash memory with error correcting code (ECC) and up to 64 kB of system random-access memory (RAM) with parity.

The ADuCM3027/ADuCM3029 also feature a collection of digital peripherals, and an analog subsystem that provides clocking, reset, and power management capabilities in addition to an analog-to-digital converter (ADC) subsystem.

Refer to the [ADuCM3027/ADuCM3029](#) product pages for future updates.

### 4/2017—Revision 0: Initial Version

## OVERVIEW

The [ADuCM3027/ADuCM3029](#) evaluation board found in the [EZ-KIT](#) allows a user to program, debug, and evaluate the performance of the [ADuCM3027/ADuCM3029](#) MCUs.

## CONTENTS

The [EZ-KIT](#) package contains the following items (see Figure 2):

- [ADuCM3027/ADuCM3029 EZ-KIT](#) board
- USB 2.0 cable
- J-Link LITE emulator

Figure 2. [EZ-KIT](#) Package Contents

### J-Link LITE Emulator

The J-Link LITE emulator board provides a debug path interface via serial wire, power supply, and universal asynchronous receiver/transmitter (UART) communication with the [ADuCM3027/ADuCM3029](#) EZ-KIT board. Figure 3 shows a top view of the emulator board.

Figure 3. J-Link LITE Emulator

The serial wire debug connector is a 20-pin device, but only three connections are made: SWDIO and SWCLK are used for debug purposes and the RESET connection provides a reset from the PC, if required. Table 1 shows the JTAG connector pin configuration.

**Table 1. JTAG Connector Pin Configuration**

Pin	Signal
1	VDD
4, 6, 8, 10, 12, 14, 16, 18, 20	GND
7	SWDIO
9	SWCLK
15	RESET

When measuring current consumption using an external supply on the [ADuCM3027/ADuCM3029](#) EZ-KIT board, it is recommended to disconnect the emulator.

## BOARD FEATURES

### Power Supply

The [EZ-KIT](#) evaluation board can be powered by numerous sources to evaluate the capability of the [ADuCM3027/ADuCM3029](#) MCUs.

The following sources are the options for powering the evaluation board:

1. External power supply. The [EZ-KIT](#) evaluation board package can be powered by a 5 V dc regulated power adaptor (not included in the evaluation kit). To use the adaptor to supply the MCU, Pin 3 and Pin 5 of JP1 and Pin 1 and Pin 3 of JP2 must be shorted; then, connect the adaptor to the P8 power jack.
2. J-Link LITE emulator. The J-Link LITE emulator can power the evaluation board while debugging and programming the MCU. To use this option, short Pin 1 and Pin 3 of JP1 and Pin 1 and Pin 3 of JP2. To power the board by this option, command the J-Link to power the board, run the J-Link commander, and then execute the **power on perm** command.
3. USB power supply. The [EZ-KIT](#) board can draw power from the USB to the UART port on the lower right side of the board. To configure for this setup, short Pin 3 and Pin 4 of JP1 and Pin 1 and Pin 3 of JP2.
4. Coin cell battery. The [EZ-KIT](#) board can be powered by a 3 V coin cell battery (included in the kit). To use the coin cell battery, short Pin 1 and Pin 2 of JP12 and Pin 3 and Pin 4 of JP2.
5. AA battery. To use an AA battery, short Pin 2 and Pin 3 of JP12 and Pin 3 and Pin 4 of JP2.
6. PV Cell. The [EZ-KIT](#) board can be also be powered by Analog Devices, Inc., energy harvesting kits. To use this as an option, short Pin 3 and Pin 5 of JP2.

The configuration for the power options are listed in Table 2. The numbers indicate the pins to be shorted.

**Table 2. Power Option Configurations of EZ-KIT Board**

Sources	JP1 <sup>1</sup>	JP2	JP12 <sup>1</sup>
External Power Adapter	3, 5	1, 3	X
Emulator/J-Link LITE	1, 3	1, 3	X
USB Power	3, 4	1, 3	X
Coin Cell Battery	X	3, 4	1, 2
AA Battery	X	3, 4	2, 3
PV Cell	X	3, 5	X

<sup>1</sup> X means don't care.

The 5 V sources (external power, emulator, and USB) are connected to the on-board 3.3 V low dropout (LDO) regulator before they power the components and the MCU on the board.

The battery and the PV cell supplies are directly connected to the **EZ-KIT** internal components (MCU, flash, temperature sensor, and accelerometer). Do not supply more than 3.6 V on the battery and PV cell terminals to avoid damaging the MCU.

## ***Power Indicator/General-Purpose LEDs***

The **EZ-KIT** board has five light emitting diodes (LEDs) to indicate different board statuses. LED1 (red) indicates if the board has been reset. LED2 (green) indicates that the board is powered up.

General-purpose yellow LEDs (LED3, LED4, and LED5) are programmable and connected to the pins of the MCU. These are all active low LEDs; this means that writing low to the pins where the LED is connected lights up the LEDs.

The LED to MCU pin connections are described in Table 3.

**Table 3. LED to MCU Pin Connections**

<b>LED</b>	<b>Mnemonic</b>
LED1	SYS_HWRST
LED2	Not applicable (LED2 is directly connected to the power line)
LED3	P0_13, GPIO13, XINT0_WAKE2
LED4	P1_12, GPIO28
LED5	P0_13, GPIO29

*Crystal Circuits*

The **EZ-KIT** board uses two crystals to clock the system: a 26 MHz and a 32.768 kHz crystal. The 26 MHz crystal is a possible clock source for the full system such as the core, SRAM, bus, flash, and others. The 32.768 kHz crystal is a possible clock source of the LF MUX, connected to the low speed peripherals, such as the beeper controller or timers.

## ***Emulator Interface***

Application, download, and emulation are possible on the ADuCM3027/ADuCM3029 via serial wire by using the J-Link LITE emulator through the P4 connector on the EZ-KIT board.

## ***Reset/Wake/Boot/General-Purpose Push Buttons***

The EZ-KIT board has five push buttons (see Figure 4) with different operations assigned to them.

- The boot mode select switch (SW1) determines the boot mode of the processor. By default, the processor boots from the internal flash memory. When pressed, the UART download mode is triggered. See the [ADuCM3029 EZ-KIT® Manual](#), Revision 1.0 for further information. (This is the manual included in the downloadable board support package for the ADuCM3027/ADuCM3029).
  - The reset switch (SW2) resets the [ADuCM3027/ADuCM3029](#) processor.
  - The wake switch (SW3) is connected to the processor wake signals, and it is used to wake up the processor during low power modes. Depending on the configuration of JP10, the different external interrupts wake up the MCU.
  - Table 4 shows which pins must be shorted on JP10 to choose which external interrupt is connected to the WAKE switch.

**Table 4.** External Interrupt Choice for the WAKE Switch

Pins	Signal
1, 2	XINT0_WAKE0
3, 4	XINT0_WAKE1
5, 6	XINT0_WAKE3
7, 8	XINT0_WAKE4

- The PB0 switch (SW5) is a general-purpose switch connected to (GPIO) P1.14.
  - The PB1 switch (SW4) is a general-purpose switch connected to (GPIO) P2.6.

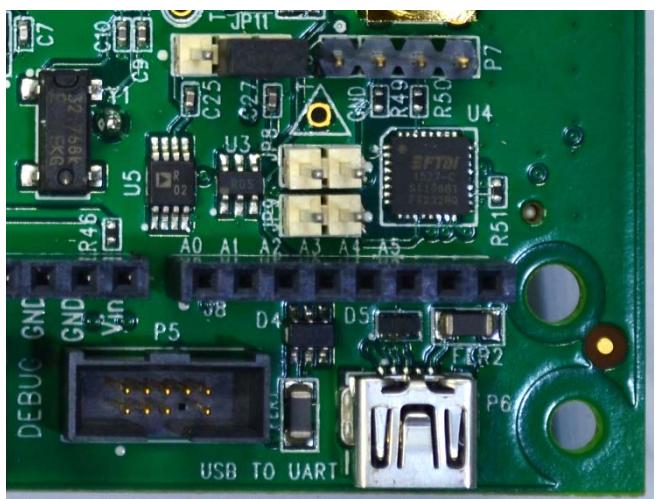

Figure 4. EZ-KIT Push Buttons Located Near the LEDs

## **USB to UART Interface**

The [EZ-KIT](#) has an on-board USB to UART interface circuit used to connect the [ADuCM3027/ADuCM3029](#) MCUs to a PC. The USB to UART functionality is provided by an FT232R (U4) chip. The chip handles the entire USB protocol on-chip, and no USB firmware development is required. The FT232R can transfer data at rates from 300 Baud to 3 MBaud at transistor to transistor (TTL) levels.

The ADuCM3027/ADuCM3029 MCUs UART0 pins are connected directly to the interface pins of the FT232R chip (U4). If another USB to UART module is used, the UART0 signals can be tapped on the P7 4 × 1 header.

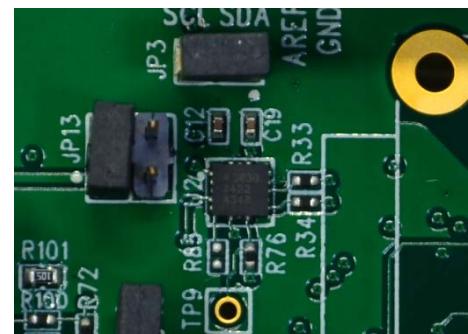

*Figure 5. USB to UART Circuit*

## **On-Board Tri Sensor Circuit (Accelerometer, Temperature, and ADC)**

The [EZ-KIT](#) board has an on-board tri sensor circuit consisting of a 3-axis microelectromechanical systems (MEMS) accelerometer, a temperature sensor, and an analog-to-digital converter (ADC); which is provided by the [ADXL363](#) (U2). This circuit is shown in Figure 6.

The entire system consumes less than 2  $\mu$ A at a 100 Hz output data rate and 270 nA that, when in motion, triggers the wake-up mode. The ADXL363 communicates with the ADuCM3027/ADuCM3029 MCUs via the serial port interface (SPI2). The accelerometer provides selectable measurements of  $\pm 2$  g,  $\pm 4$  g, and  $\pm 8$  g with a resolution of 1 mg/LSB on the  $\pm 2$  g range. The temperature sensor operates with a scale factor of 0.065°C. The ADC has no external connections, but it can be used by tapping to R85 trace.

This circuit can be powered down by unshorting the JP3 header.

*Figure 6. Tri Sensor Circuit*

## **On-Board Digital I<sup>2</sup>C Temperature Sensor**

The EZ-KIT board has an on-board I<sup>2</sup>C digital temperature sensor, [ADT7420](#). The ADT7420 (U6) is rated for operation over the -40°C to +150°C temperature range.

The ADT7420 operates from 2.7 V to 5.5 V. Operating at 3.3 V, the average supply current is typically 210  $\mu$ A and the shutdown current is typically 2.0  $\mu$ A.

The **ADT7420** has two available pins for address selection with four possible I<sup>2</sup>C addresses. The user can configure the address by soldering resistors either in R39 and R40 (to GND), or in R41 and R42 (to VBAT). The default address is 0x48.

The [ADT7420](#) is connected to the I<sup>2</sup>C0 interface and can generate an interrupt signal to interrupt the MCU. The interrupt signal pin of the [ADT7420](#) is connected to Pin P1\_14 of the [ADuCM3027/ADuCM3029](#).

The temperature sensor can be disconnected from the board supply by unshorting the JP5 header. Figure 7 shows the circuit with the ADT7420 chip in the middle and the JP5 header above the chip.

*Figure 7. I<sup>2</sup>C Temperature Circuit*

### On-Board 32 Mb Serial Flash Memory

The EZ-KIT board has an on-board serial flash memory that can store voice, text, and data.

The serial flash memory (U7) is a W25Q32 chip that has a storage size of 32 Mb. The chip supports a standard serial peripheral interface (SPI) with speeds up to 104 MHz. The chip is interfaced with the SPI2 of the MCU and can be disconnected from the board by unshorting the JP4 header.

Figure 8 shows the circuit with the W25Q32 chip in the middle and the JP4 header below the flash chip.

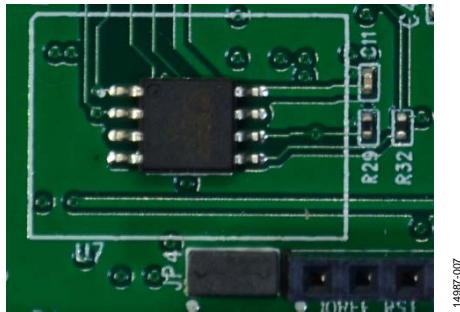

Figure 8. External 32 Mb Serial Flash Memory

### On-Board Buzzer

The EZ-KIT has a buzzer (D1) that can generate tones and alarms with the beeper controller inside the ADuCM3027/ADuCM3029 MCU. Figure 9 shows the buzzer chip beside the PV cell connector.

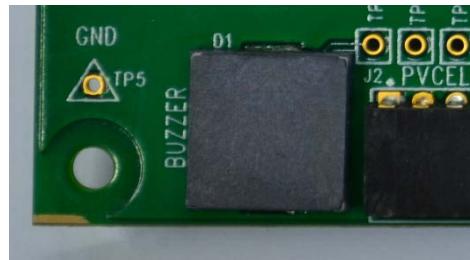

Figure 9. Buzzer Chip

## EZ-KIT BOARD CONNECTORS

The EZ-KIT board has a number of connectors used to connect different boards and kits for evaluation. The connector locations are shown in Figure 10.

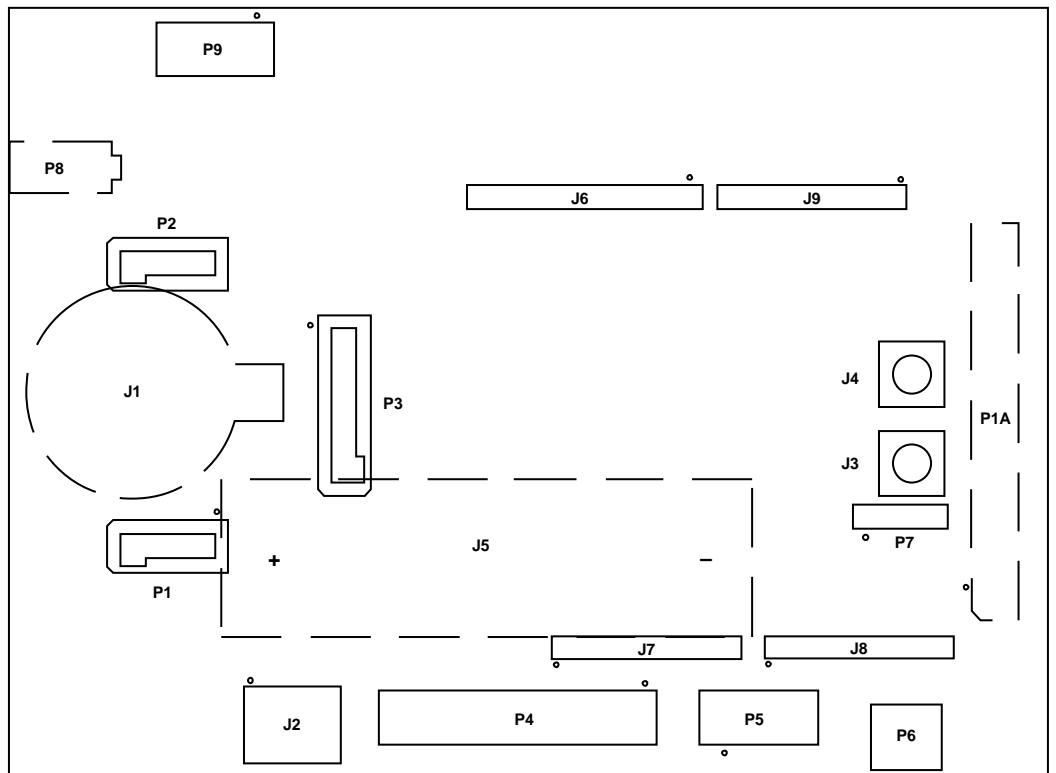

Figure 10. Connector Locations

## ARDUINO UNO CONNECTORS (J6, J7, J8, AND J9)

The EZ-KIT board has an Arduino Uno compatible form factor interface that can accept Arduino shields and daughter boards. The pinout of the Arduino interface is described in Table 5 through Table 8.

**Table 5. Arduino Interface J6 Connector Pinout**

<b>J6 Pin No.</b>	<b>Arduino Pin</b>	<b>ADuCM3027/ADuCM3029 Pin</b>
1	8	P1_02/GPIO18/SPI2_CLK
2	9	P1_15/GPIO31

Figure 12. J7 and J8 Arduino Compatible Interface (Power and ADC)

*Figure 13. J9 Arduino Compatible Interface (GPIO)*

### EXPANSION INTERFACE 3 (EI3)

The EZ-KIT board includes one expansion interface connector located on the bottom side of the board. EI3 supports connection to other EI3 daughter boards designed by Analog Devices, extending the evaluation board capabilities. The connectors provide power, ground, reset, ADC, I<sup>2</sup>C, SPI, UART, SPORT, and GPIO signals.

An EI3 [SDP breakout board](#) (which is sold separately), as shown in Figure 15, is required to tap and probe the signals in this connector.

Figure 14. EI3 Connector

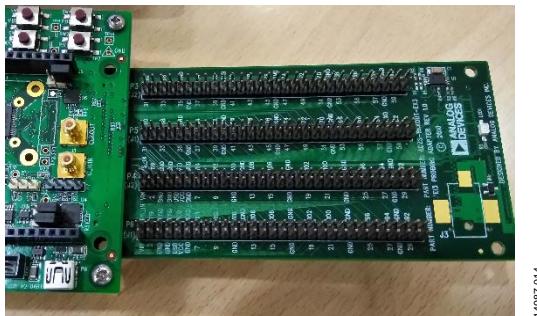

Figure 15. EI3 SDP Breakout Board Connected to EZ-KIT Board

### WIRELESS TRANCEIVERS INTERFACE (P1, P2, AND P3)

The wireless transceiver daughterboard interface supports the [ADF7023](#), [ADF7024](#), [ADF7242](#), [ADF7030](#), and [ADF7030-1](#) wireless transceivers. These are low power, high performance, integrated radio transceivers supporting a wide range of modulation schemes and channel widths in the sub GHz and 2.4 GHz frequency ranges.

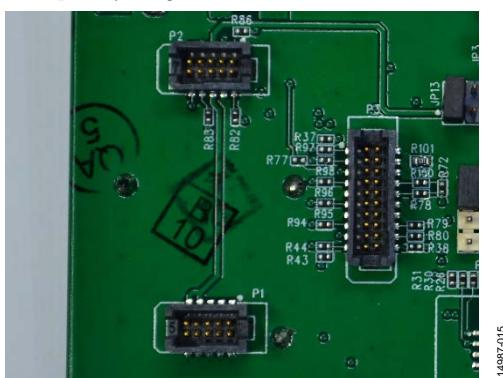

Figure 16. Wireless Transceiver Interface

### EMULATION AND SERIAL INTERFACE CONNECTOR (P4, P5, AND P9)

The P4, P5, and P9 connectors provide a connection from the EZ-KIT board to the emulator board. P4 is a 20-pin standard JTAG connector compatible with the J-Link LITE emulator. P5 and P9 are 10-pin debug/emulator connectors with serial wire, power source, and UART signal lines for debugging purposes.

## NOTES

### ESD Caution

**ESD (electrostatic discharge) sensitive device.** Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

### Legal Terms and Conditions

By using the evaluation board discussed herein (together with any tools, components documentation or support materials, the "Evaluation Board"), you are agreeing to be bound by the terms and conditions set forth below ("Agreement") unless you have purchased the Evaluation Board, in which case the Analog Devices Standard Terms and Conditions of Sale shall govern. Do not use the Evaluation Board until you have read and agreed to the Agreement. Your use of the Evaluation Board shall signify your acceptance of the Agreement. This Agreement is made by and between you ("Customer") and Analog Devices, Inc. ("ADI"), with its principal place of business at One Technology Way, Norwood, MA 02062, USA. Subject to the terms and conditions of the Agreement, ADI hereby grants to Customer a free, limited, personal, temporary, non-exclusive, non-sublicensable, non-transferable license to use the Evaluation Board FOR EVALUATION PURPOSES ONLY. Customer understands and agrees that the Evaluation Board is provided for the sole and exclusive purpose referenced above, and agrees not to use the Evaluation Board for any other purpose. Furthermore, the license granted is expressly made subject to the following additional limitations: Customer shall not (i) rent, lease, display, sell, transfer, assign, sublicense, or distribute the Evaluation Board; and (ii) permit any Third Party to access the Evaluation Board. As used herein, the term "Third Party" includes any entity other than ADI, Customer, their employees, affiliates and in-house consultants. The Evaluation Board is NOT sold to Customer; all rights not expressly granted herein, including ownership of the Evaluation Board, are reserved by ADI. CONFIDENTIALITY. This Agreement and the Evaluation Board shall all be considered the confidential and proprietary information of ADI. Customer may not disclose or transfer any portion of the Evaluation Board to any other party for any reason. Upon discontinuation of use of the Evaluation Board or termination of this Agreement, Customer agrees to promptly return the Evaluation Board to ADI. ADDITIONAL RESTRICTIONS. Customer may not disassemble, decompile or reverse engineer chips on the Evaluation Board. Customer shall inform ADI of any occurred damages or any modifications or alterations it makes to the Evaluation Board, including but not limited to soldering or any other activity that affects the material content of the Evaluation Board. Modifications to the Evaluation Board must comply with applicable law, including but not limited to the RoHS Directive. TERMINATION. ADI may terminate this Agreement at any time upon giving written notice to Customer. Customer agrees to return to ADI the Evaluation Board at that time. LIMITATION OF LIABILITY. THE EVALUATION BOARD PROVIDED HEREUNDER IS PROVIDED "AS IS" AND ADI MAKES NO WARRANTIES OR REPRESENTATIONS OF ANY KIND WITH RESPECT TO IT. ADI SPECIFICALLY DISCLAIMS ANY REPRESENTATIONS, ENDORSEMENTS, GUARANTEES, OR WARRANTIES, EXPRESS OR IMPLIED, RELATED TO THE EVALUATION BOARD INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTY OF MERCHANTABILITY, TITLE, FITNESS FOR A PARTICULAR PURPOSE OR NONINFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. IN NO EVENT WILL ADI AND ITS LICENSORS BE LIABLE FOR ANY INCIDENTAL, SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES RESULTING FROM CUSTOMER'S POSSESSION OR USE OF THE EVALUATION BOARD, INCLUDING BUT NOT LIMITED TO LOST PROFITS, DELAY COSTS, LABOR COSTS OR LOSS OF GOODWILL. ADI'S TOTAL LIABILITY FROM ANY AND ALL CAUSES SHALL BE LIMITED TO THE AMOUNT OF ONE HUNDRED US DOLLARS (\$100.00). EXPORT. Customer agrees that it will not directly or indirectly export the Evaluation Board to another country, and that it will comply with all applicable United States federal laws and regulations relating to exports. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the substantive laws of the Commonwealth of Massachusetts (excluding conflict of law rules). Any legal action regarding this Agreement will be heard in the state or federal courts having jurisdiction in Suffolk County, Massachusetts, and Customer hereby submits to the personal jurisdiction and venue of such courts. The United Nations Convention on Contracts for the International Sale of Goods shall not apply to this Agreement and is expressly disclaimed.
