

Product Specification

RoHS-6 Compliant

1G/10G 10km Datacom SFP+ Transceiver

FTLX1471D3BCV

PRODUCT FEATURES

- Hot-pluggable SFP+ footprint
- Supports rate selectable 1.25 Gb/s or 9.95 to 10.3 Gb/s bit rates
- Power dissipation < 1W
- RoHS-6 compliant (lead-free)
- Commercial temperature range -5°C to 70°C
- Single 3.3V power supply
- Maximum link length of 10km
- Uncooled 1310nm DFB laser
- Receiver limiting electrical interface
- Duplex LC connector
- Built-in digital diagnostic functions

APPLICATIONS

- 1000BASE-LX 1G Ethernet
- 10GBASE-LR/LW 10G Ethernet

Finisar's FTLX1471D3BCV 1G/10G Dual-Rate SFP+ transceivers are designed for use in 1-Gigabit and 10-Gigabit Ethernet links up to 10km over singlemode fiber. They are compliant with SFF-8431¹, IEEE 802.3-2005 10GBASE-LR/LW² and 1000BASE-LX³. Digital diagnostics functions are available via a 2-wire serial interface, as specified in SFF-8472⁴. This product is for applications specifically designed for 10G SFP+ ports and 1G/10G SFP+ ports and not native 1G SFP ports. The FTLX1471D3BCV is a "limiting module", i.e., it employs a limiting receiver. Host board designers using an EDC PHY IC should follow the IC manufacturer's recommended settings for interoperating the hostboard EDC PHY with a limiting receiver SFP+ module. The optical transceivers are compliant per the RoHS Directive 2011/65/EU. See Finisar Application Note AN-2038 for more details.

PRODUCT SELECTION

FTLX1471D3BCV

1.	. Pin Descriptions								
Pin	Symbol	Name/Description	Ref.						
1	VEET	Transmitter Ground	1						
2	TFAULT	Transmitter Fault	2						
3	TDIS	Transmitter Disable. Laser output disabled on high or open.	3						
4	SDA	2-wire Serial Interface Data Line	4						
5	SCL	2-wire Serial Interface Clock Line	4						
6	MOD_ABS	Module Absent. Grounded within the module	4						
7	RS0	RS0 for Rate Select: Open or Low = Module supports 1.25 Gb/s	5						
		High = Module supports 9.95 Gb/s to 10.3125 Gb/s							
8	RX_LOS	Loss of Signal indication. Logic 0 indicates normal operation.	6						
9	RS1	No connection required							
10	V_{EER}	Receiver Ground	1						
11	V_{EER}	Receiver Ground	1						
12	RD-	Receiver Inverted DATA out. AC Coupled.							
13	RD+	Receiver Non-inverted DATA out. AC Coupled.							
14	V_{EER}	Receiver Ground	1						
15	V _{CCR}	Receiver Power Supply							
16	V _{CCT}	Transmitter Power Supply							
17	V_{EET}	Transmitter Ground	1						
18	TD+	Transmitter Non-Inverted DATA in. AC Coupled.							
19	TD-	Transmitter Inverted DATA in. AC Coupled.							
20	V_{EET}	Transmitter Ground	1						

I. Pin Descriptions

Notes:

1. Circuit ground is internally isolated from chassis ground.

T_{FAULT} is an open collector/drain output, which should be pulled up with a 4.7k – 10k Ohms resistor on the host board if intended for use. Pull up voltage should be between 2.0V to Vcc + 0.3V. A high output indicates a transmitter fault caused by either the TX bias current or the TX output power exceeding the preset alarm thresholds. A low output indicates normal operation. In the low state, the output is pulled to <0.8V.

- 3. Laser output disabled on $T_{DIS} > 2.0V$ or open, enabled on $T_{DIS} < 0.8V$.
- 4. Internally pulled down per SFF-8431 Rev 3.0.
- 5. Transceiver data rate selected through the 2-wire bus in accordance with SFF-8472 Rev. 10.3. Soft RS0 is set at Bit3, Byte 110, Address A2h. Soft RS0 default state on power up is '0' LOW, and the state is reset following a power cycle. Writing '1' HIGH selects max. data rate operation. Transceiver data rate is the logic OR of the input state of the RS0 pin and soft RS0 bit. Thus, if either the RS0 pin OR the soft RS0 bit is HIGH then the selected data rate will be 9.95 and 10.3 Gb/s. Conversely, to select data rate 1.25 Gb/s both the RS0 pin and the soft RS0 bit are set LOW.
- 6. LOS is open collector output. Should be pulled up with $4.7k 10k\Omega$ on host board to a voltage between 2.0V and 3.6V. Logic 0 indicates normal operation; logic 1 indicates loss of signal.

Figure 1. Diagram of Host Board Connector Block Pin Numbers and Names.

FINISAR

II. Absolute Maximum Ratings

Exceeding the limits below may damage the transceiver module permanently.

Parameter	Symbol	Min	Тур	Max	Unit	Ref.
Maximum Supply Voltage	Vcc	-0.5		4.0	V	
Storage Temperature	Ts	-40		85	°C	
Relative Humidity	RH	0		85	%	1

1. Non-condensing.

III. Electrical Characteristics (T_{OP} = -5 to 70 °C, V_{CC} = 3.14 to 3.46 Volts)

Parameter	Symbol	Min	Тур	Max	Unit	Ref.
Supply Voltage	Vcc	3.14		3.46	V	
Supply Current	Icc		200	285	mA	
Transmitter						
Input differential impedance	R _{in}		100		Ω	1
Differential data input swing	Vin,pp	180		700	mV	2
Transmit Disable Voltage	VD	2		Vcc	V	
Transmit Enable Voltage	V_{EN}	Vee		Vee+ 0.8	V	
Receiver						
Differential data output swing	Vout,pp	300		850	mV	3
Output rise time and fall time	T _r , T _f	30			ps	4
LOS Fault	V _{LOS fault}	2		Vcc _{HOST}	V	5
LOS Normal	V _{LOS norm}	Vee		Vee+0.8	V	5
Power Supply Noise Tolerance	VccT/VccR	Per S	FF-8431	Rev 3.0	mVpp	6

Notes:

1. Connected directly to TX data input pins. AC coupling from pins into laser driver IC.

2. Voltage swing for 1G operation is equivalent to voltage swing in 10G operation (SFF-8431 Rev 3.0).

- 3. Into 100Ω differential termination. Voltage swing for 1G operation is equivalent to voltage swing in 10G operation (SFF-8431 Rev 3.0).
- 4. 20 80%. Measured with Module Compliance Test Board and OMA test pattern. Use of four 1's and four 0's sequence in the PRBS 9 is an acceptable alternative.
- 5. LOS is an open collector output. Should be pulled up with $4.7k\Omega 10k\Omega$ on the host board. Normal operation is logic 0; loss of signal is logic 1.
- 6. See Section 2.8.3 of SFF-8431 Rev 3.0.

VI. General Specifications

Parameter	Symbol	Min	Тур	Max	Units	Ref.
Bit Rate (RS0 = LOW)	BR		1.25		Gb/s	1
Bit Rate (RS0 = HIGH)	BR	9.95	10.3		Gb/s	2
Max. Supported Link Length	L _{MAX}		10		km	

Notes:

- 1. 1000BASE-LX. Tested with a 2⁷ 1 PRBS. See Section I, Note 5 for RS0 conditions for 1.25Gb/s operation.
- 10GBASE-LR/LW. Tested with a 2³¹ 1 PRBS. See Section I, Note 5 for RS0 conditions for 10.3 Gb/s operation.

VII. Environmental Specifications

Finisar FTLX1471D3BCV transceivers have an operating temperature range from -5° C to $+70^{\circ}$ C case temperature.

Parameter	Symbol	Min	Тур	Max	Units	Ref.
Case Operating Temperature	T _{op}	-5		70	°C	
Storage Temperature	T _{sto}	-40		85	°C	

VIII. Regulatory Compliance

Finisar transceivers are Class 1 Laser Products and comply with US FDA regulations. These products are certified by TÜV and CSA to meet the Class 1 eye safety requirements of EN (IEC) 60825 and the electrical safety requirements of EN (IEC) 60950. Copies of certificates are available at Finisar Corporation upon request.

IX. Digital Diagnostic Functions

Finisar FTLX1471D3BCV SFP+ transceivers support the 2-wire serial communication protocol as defined in the SFP MSA^1 . It is very closely related to the E^2PROM defined in the GBIC standard, with the same electrical specifications.

The standard SFP serial ID provides access to identification information that describes the transceiver's capabilities, standard interfaces, manufacturer, and other information.

Additionally, Finisar SFP+ transceivers provide an enhanced digital diagnostic monitoring interface, which allows real-time access to device operating parameters such as transceiver temperature, laser bias current, transmitted optical power, received optical power and transceiver supply voltage. It also defines a sophisticated system of alarm and warning flags, which alerts end-users when particular operating parameters are outside of a factory set normal range.

The SFP MSA defines a 256-byte memory map in E²PROM that is accessible over a 2-wire serial interface at the 8 bit address 1010000X (A0h). The digital diagnostic monitoring interface makes use of the 8 bit address 1010001X (A2h), so the originally defined serial ID memory map remains unchanged. The interface is identical to, and is thus fully backward compatible with both the GBIC Specification and the SFP Multi Source Agreement. The complete interface is described in Finisar Application Note AN-2030: "Digital Diagnostics Monitoring Interface for SFP Optical Transceivers".

The operating and diagnostics information is monitored and reported by a Digital Diagnostics Transceiver Controller (DDTC) inside the transceiver, which is accessed through a 2-wire serial interface. When the serial protocol is activated, the serial clock signal (SCL, Mod Def 1) is generated by the host. The positive edge clocks data into the SFP transceiver into those segments of the E^2 PROM that are not write-protected. The negative edge clocks data from the SFP transceiver. The serial data signal (SDA, Mod Def 2) is bi-directional for serial data transfer. The host uses SDA in conjunction with SCL to mark the start and end of serial protocol activation. The memories are organized as a series of 8-bit data words that can be addressed individually or sequentially.

For more information, please see the SFP MSA documentation^{1,5} and Finisar Application Note AN-2030.

X. Digital Diagnostic Specifications

FTLX1471D3BCV transceivers can be used in host systems that require either internally or externally calibrated digital diagnostics.

Notes: 1. Accuracy of measured Tx bias current is 10% of the actual bias current from the laser driver to the laser.

XI. Mechanical Specifications

Finisar FTLX1471D3BCV SFP+ transceivers are compatible with the SFF-8432⁷ specification for improved pluggable form factor, and shown here for reference purposes only. Bail color is blue.

Figure 2. FTLX1471D3BCV Mechanical Dimensions.

FINISAR

XII. PCB Layout and Bezel Recommendations

 ΔR ads and Vias are Chassis Ground, 11 Places A Through Holes are Unplated

NOTES:

- ▲ NINIMUM PITCH ILLUSTRATED, ENGLISH DIMENSIONS ARE FOR REFERENCE ONLY
- 2. NOT RECOMMENDED FOR PCI EXPANSION CARD APPLICATIONS

XIII. Host - Transceiver Interface Block Diagram
